

back conveyor

elevator on side door

high adjustable draw bar hydraulic stand

front conveyor (optional sliding conveyor)

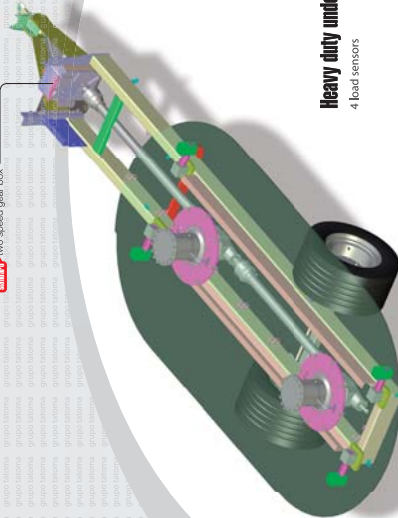

double access star with large platform which allows safe observation of the mixing process by one or more persons

hydraulic tank

Back door

center - two speed gear box

Heavy duty undercarriage
4 load sensors

Twin auger

Electro-hydraulic controls

Twin wheels

Hydraulic knives

Additional hydraulic motor

Programmable scale

Motor for lifting

Twin auger vertical mixer

The Two Auger Vertical Mixer "TURBO" system has been specifically designed to quickly and efficiently process entire round and rectangular bales and meet the needs of any size of dairy or cattle farm thanks to a wide range of capacities available.

The mixing chamber and augers design allows for easy circulation of the mix ingredients without degradation. TATOMA system cuts and mixes the ingredients simultaneously and reduces the daily feeding workload and is a more uniform and fully feed mixture easier to ingest for the animals.

The two heavy duty 90 gear boxes require very little horsepower to rotate and are designed to last for many years. The machine features low moving parts with no chains or sprockets to worry about. All our machines are driven by two speed gear box allowing the machine to be handled by very low horse power tractor.

The mixing chamber is lying to a fully independent chassis utilizing four lead calls. The design provides maximum strength and accuracy allowing you to create rations for better TMR management.

Several options are available for our duplo machines to adapt the mixer for individual requirements and specially designed to provide more accurate placement of the feed and to adapt the machine for the farm conditions.

More than 25 years of experience allows TATOMA to provide a very accurate machine built with very high quality materials to deliver many years of trouble free service.
